

FRAZIER RELIABILITY SOLUTIONS

Drone Inspection Technologies for the Construction Industry

Earthworks – Accurate maps, 3D digital surface models and terrain modeling. Volumetric analysis, stockpile measurements, contour data. Survey earthworks quickly, easily, and accurately.

BIM – Building Information Modeling. Analyze as-built site data, using easily updated orthophotos or 3D models created from images. On our cloud platform, conduct measurements, compare the current build with design drawings & share results. Keeping projects on schedule and on design.

Inspection - Locate defects in 3D from images, visualize structural details from multiple angles, model thermal behavior of buildings or equipment, and export orthophotos from any plane.

High Resolution Aerial Photography and Videography
Live Streaming Video, Video Editing
2D Survey Maps and 3D Digital and Plastic Elevation Models
Fully Insured FAA Licensed Pilots
